

BRIEFER ON TIER 2 PROPOSALS (FY 2025)						
Priority Ranking No.:						
1. Title:		ESTABLISHMENT OF QUIRINO TRADING CENTER				
2. Implementing Unit:		DA RFO 02				
3. Categorization: <i>(Put ✓ on the selected category)</i>		New		Expansion		
		Infrastructure: ☒ Non-infrastructure: ☐		Infrastructure: ☐ Non-infrastructure: ☐		
4. Total Proposal Cost:		Php75,000,000.00				
5. Description:		The Quirino Trading Center is composed of Trading Area, Stalls, Washing/Sorting and Dry Storage Area, Cold Storage, Parking Lots Proposed location is at Sta. Maria, Maddela, Quirino The project will be capable of trading banana, tomato, squash and other high value crops.				
Objectives:		1. Reduce post-harvest losses or prevent dumping of squash, tomato, banana and other high value crops in Quirino, Nueva Vizcaya and Aurora provinces. 2. Ensure price stability especially during peak season. 3. Increase number of farmers/biyaheros that have access to local market and institutional markets/ traders from nearby provinces. 4. Encourage value-adding activities such as sorting, grading, and packaging, thereby improving product quality and competitiveness.				
6. Strategic Agenda:		Food security and price stability of agricultural commodities in the Province of Quirino				
7. Implementation Scheme:		To be implemented by the Provincial Local Government Unit (PLGU) of Quirino				
8. Beneficiaries: e.g. FCAs, LGUs		Farmers, FCAs, biyaheros/traders, PLGU, Household consumers and other development partners				
9. Justification		Without the Quirino Trading Center (QTC), wholesalers, processors, and retailers would need to purchase directly from farmers, involving many transactions and higher costs. However, in many instances prices received by farmers at the farm gate are generally much lower due to the absence of marketing information and their lack of market power. The existence of monopolistic power of the traders leaves the farmers with no options but to sell to the traditional buyers and unable to bargain for higher prices especially if the former obtained cash advances from the latter. With both collection center at the farm and the proposed QTC, the number of transactions will be reduced, marketing process simplified thus, reducing the transaction costs. Under this situation, trading posts are still needed and justified to provide farmers with effective and profitable marketing outlets for their produce. It will facilitate farmers' access to the marketing system trading posts if adequately located, sized and managed, which are basic instruments for promoting fair market competition, increase market transparency, stabilize farmers and consumers prices and reduce post-harvest losses as well as reduce urban congestion and pollution.
